

Working Group on Agentic Workflows in Pharmacometrics

Launch meeting · June 25, 2026

ISoP AI/ML SIG

Co-chairs: Ari Pritchard-Bell · Peter Bloomingdale

Our mission. Bring together a community of pharmacometricians to discover, evaluate, and produce agentic workflows, codifying their collective expertise into shared, verifiable standards of practice that grow with the field.

Almost everyone arrived with the same two questions:

What can these systems actually do?

Can I trust what they produce?

And you're split about evenly between two reasons for being here:

Here to learn

see what's possible, build fluency

both

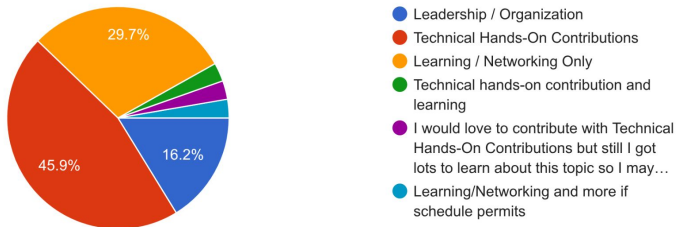

Here to build

ship workflows, tools, benchmarks

What you told us

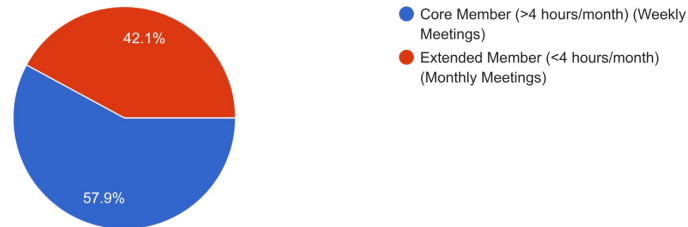

How would you like to participate?

37 responses

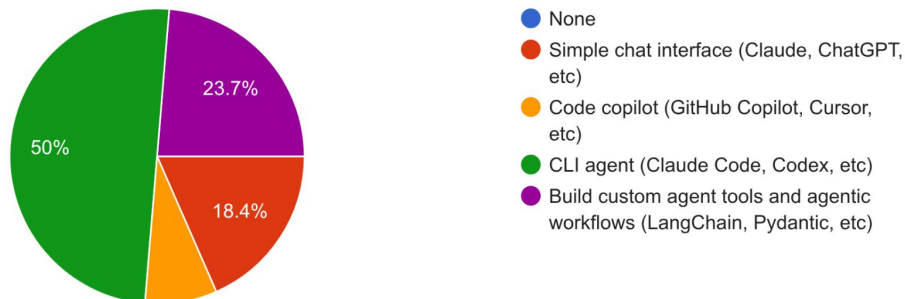

What is your desired level of participation within the working group?

38 responses

What is your level of experience with AI Agents

38 responses

The work: three objectives, three lanes

Community & shared learning

Unify terms, lower the barrier, learn in the open.

Year 1: roadmap, glossary, learning materials

Discover & harmonize tools

Curate the best tools in one open, readable, harness-agnostic stack.

Year 1: tool index + Modus/PMxAgent quickstart

Evaluation & trust

Benchmarks and tasks that evaluate PMX agents, plus the QC, traceability, and human-in-the-loop practices that turn scores into trust.

Year 1: task/evaluation template, synthetic benchmark dataset, trust checklist v0

How they connect: *learn by doing, tools discovered and evaluated, evaluation turned into trust.*

Introductions

Round the room, about 30 seconds each.

1

Who are you?

2

What brought you here?

Claim a lane

Three lanes, three places to work. Pick the one that pulls you.

Community & shared learning

Unify terms, lower the barrier, learn in the open.

Discover & harmonize tools

Curate the best tools in one open, readable, harness-agnostic stack.

Evaluation & trust

Benchmarks that evaluate PMX agents, plus the QC and traceability that turn scores into trust.

How to claim one

One Discussion post per lane is already up. Find your lane and comment on its thread. That comment is your claim.

github.com/AIML-SIG/Agentic-workflows/discussions

With the time left

1. Which lane pulls you?
2. What's missing from the plan?
3. What would get you to contribute?

Cadence: Thursdays 10am PT · monthly all-hands, biweekly building.

Charter and full roadmap in the repo.
